

AI GOVERNANCE IN THE **WORKPLACE**

Moving from Experiments to Workflows with 'The Matts'

Learn by doing, together.

A hands-on workshop to help your team think about AI governance in practice, not on paper.

A thought experiment you build for real. You build a multi-agent workflow in Microsoft Copilot Chat, then decide where a person is involved, how to evaluate what the AI produces, and how to test it.

FOUR QUESTIONS TO ASK OF ANY AI IN YOUR WORK

- 01 What could go wrong?**
- 02 Where do you place a human in the workflow?**
- 03 Who is accountable?**
- 04 How will you provide assurance?**

WHAT YOU WILL DO

Build three AI agents

Decide where the human sits

Spot risks with the UK AI toolkit

DELIVERY OPTIONS

OPTION A

3 hours

One session

The whole workshop in one sitting, from your first agent to a written risk register.

OPTION B

3 × 1 hour

Lunch and learn

One project runs across all three sessions, so please attend all three.

Dr Matthew Mort
Senior AI & Data Scientist

Helps lead the Human Gene Mutation Database and clinical AI research.
Co-developed Cardiff's AI in the Workplace training.

Matthew Hayden
Data Scientist and Bioinformatician

Specialises in AI data extraction from medical literature. NHS background; co-developed AI in the Workplace.

Together, leading the community approach to AI at Cardiff University.
